DETAILED ACTION

This action is in response to an Interview on April 11, 2008 for the application of Aino et al., for an "Information processing apparatus" filed July 7, 2003.

Claims 19, 22, 23, and 25 are amended.

Claims 20, 21, 24, 26-30, and 32-37 are cancelled.

Claims 19, 22, 23, 25, and 31 are allowed and renumbered to 1-5 respectively.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee. Authorization for this examiner's amendment was given in a telephone interview with Eric Barr on April 11, 2008. Claims 20, 21, 24, 26-30, and 32-37 are cancelled. Claims 19, 22, 23, and 25 are amended.

The claims have been amended as follows:

19. An information processing apparatus comprising:

a first computer module which includes a first controller and a second computer module which includes a second controller, wherein:

said first computer module includes a first processor, a first main-memory and a first sub-memory;

said second computer module includes a second processor, a second main-memory and a second sub-memory;

said first processor and said second processor operate substantially simultaneously and are substantially synchronized with each other;

said first controller writes data to said first main-memory and said second sub-memory according to a first write request of said first processor, and at the substantially same time, said second controller writes data to said second main-memory and said first sub-memory according to a second write request of said second processor;

wherein:

said first and second write requests are associated with the same data;

said first controller controls so that while said first processor and said second processor are synchronized, read access from said first processor is carried out as against said first main-memory and write access from said first processor is carried out as against said first main-memory and said second sub-memory and write access from said second processor is carried out as against said first sub-memory, and said first controller controls so that, when said first processor fails to be in synchronism with said second processor, read access from said first processor is carried out as against said first sub-memory and write access from said first processor is carried out as against said first main-memory, said first sub-memory and said second sub-memory; and

said first controller copies the contents of said first sub-memory to said first main-memory when said first processor fails to be in synchronism with said second processor.

22. The information processing apparatus as claimed in claim 19, wherein said first controller copies the contents of said first sub-memory to said first main-memory by means of a direct memory access circuit.

23. The information processing apparatus as claimed in claim 19, wherein said first processor recovers said synchronism with said second processor when said copy is completed for all memory areas of said first sub-memory.

25. The information processing apparatus as claimed in claim 19, wherein said first and second controllers are connected as a ring for three or more other computer modules.

31. The information processing apparatus as claimed in claim 19, wherein said first and second computer modules are on lockstep fault tolerant computer system.

Reasons for allowance

The following is an examiner's statement of reasons for allowance:

In response to applicant's arguments regarding claim 19, after a complete search of all the relevant prior art the examiner has determined the claims are in condition for allowance. The following limitations when viewed in combination with the remainder of the claim as a whole place this application in condition for allowance.

As per claim 19, the examiner finds the novel and non obvious feature of claim 19, when read as whole to be when said first processor fails to be in synchronism with said second processor, read access from said first processor is carried out as against said first sub-memory and write access from said first processor is carried out as against said first main-memory, said first sub-memory and said second sub-memory; and

said first controller copies the contents of said first sub-memory to said first main-memory when said first processor fails to be in synchronism with said second processor.

Horst discloses a reintegration process for 2 CPUs, wherein the on-line CPU copies the contents of its memory to the memory of the off-line CPU (col. 89, lines 43-53). However Horst does not teach copying the contents of a sub-memory to a main memory in the offline processor as recited in claim 19. Therefore, claim 19 is allowable over Horst.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
